SUMMARY

Full Stack Developer with 3+ years of industry experience and an M.S. in Computer Science from Clemson University (GPA 3.86). At Wipro Delivered 12+ insurance products for Client Aditya Birla Sun Life Insurance (ABSLI) at Wipro on a MERN-stack platform, integrating 30+ third-party systems, with optimizations that reduced average execution time by 35–40%. Now leading full-stack development on a graduate-research SAT tutoring platform built with React, Node.js, DynamoDB, and AWS. Seeking full-stack or software engineering roles, with applied ML and cloud work as a plus.

EXPERIENCE

Graduate Assistant | *Clemson University — Clemson, SC (Remote)* Nov 2024 — May 2026

- Built Prepitus, an AI-powered Digital SAT tutoring platform, with a graduate research team — contributing across frontend, backend, infrastructure, and payments.
- Developed the React.js frontend and Node.js/Express.js backend on DynamoDB and AWS (EC2, S3), delivering the end-to-end web application from design through production deployment.
- Sole developer of the end-to-end Stripe payment integration, including checkout flows and subscription management.
- Delivered 10 full-length SAT mock tests, a 787-question topic-scoped practice bank, and OpenAI-generated concept quizzes for unlimited on-demand practice.
- Built and deployed a Deep Knowledge Tracing (DKT) service — an LSTM model scoring per-student mastery across 30 SAT knowledge components — as a FastAPI inference API on AWS (EC2, S3) with an async retrain endpoint, personalizing recommendations for 450+ students.

Full Stack Developer | *Wipro Ltd — Mumbai, India (in Office)* Apr 2022 — May 2024

- Built the Leap onboarding portal — a MERN-stack platform that unified customer and policy onboarding for Aditya Birla Sun Life Insurance (ABSLI), one of India's largest private life insurers (430+ branches, 65,500+ direct selling agents, ₹99,500 Cr AUM) — across seven retail business streams.
- Developed full-stack features across the React.js frontend and Node.js backend, integrating 30+ third-party services — credit checks (CRIF), identity verification (HyperVerge), and core insurance platforms (Product Express, Ingenium Mainframe).
- Implemented redundant-provider fallback logic (e.g., auto-routing to a secondary credit-check service when the primary went down) to keep onboarding flows live during third-party outages.
- Replaced ABSLI's legacy onboarding system; delivered 12+ insurance products across multiple business channels with performance optimizations that reduced average execution time by 35–40%, contributing as part of an 11-engineer team (8 onsite + 3 remote).

EDUCATION

Clemson University — Clemson, SC Aug 2024 — May 2026

Master of Science, Computer Science | GPA: 3.86

Relevant Courses: Artificial Intelligence, Cloud Computing, Machine Learning: Impl & Eval, Machine Learning for Graphs, Malware Reverse Engineering, Blockchain Technology & Web3, Distributed Denial of Service Attacks

St. Francis Institute of Technology — Mumbai, India Aug 2018 — May 2022

Bachelor of Engineering, Computer Engineering | GPA: 8.14/10

CSI-SFIT Treasurer (2020–2021) | CSI-SFIT Creative Executive (2019–2020) | Basketball Team Member

PROJECTS

KotiKutz — Barbershop Booking Platform *Freelance*

Next.js 16, React 19, TypeScript, Supabase, Tailwind CSS 4 | [Live Demo](#) | [GitHub](#)

- Built a full-stack booking platform with role-based access (customer, employee, manager, super admin) and a multi-step appointment booking flow.
- Implemented SSR for public pages, replacing client-side fetching for improved SEO and eliminating loading flash.
- Integrated transactional email notifications (booking confirmation, cancellation, 24h reminders) via Nodemailer + Gmail SMTP with a Vercel cron job.

- Built an admin dashboard with analytics, staff management, service/offer CRUD, testimonial moderation, and location-scoped settings.
- Configured Supabase Auth with invite-by-email for staff onboarding, Google OAuth linking, and row-level security.

7Square — Real Estate Website

Freelance

React, Node.js, Express, Firebase | [Live Site](#) | GitHub: [Frontend](#) / [Backend](#)

- Built a real estate platform featuring property listings, company profile, user login, and an admin section for managing listings.
- Allows customers to browse properties online and contact the agency directly through the site.

D-Monitor — Disaster Monitoring and Response System

St. Francis Institute of Technology

- Developed a cross-platform Flutter mobile app integrating live telemetry maps, real-time analytics, news feeds, and tweet streams for on-the-go disaster monitoring.
- Enhanced the React.js frontend and Node.js/Python backend, fixing bugs and refining RESTful API endpoints as part of a 4-person team.
- Built a data pipeline using Scrapy for live alert scraping; applied SVM, BERT, and sentiment analysis in Python with results indexed in Elasticsearch on GCP.

SKILLS

Frontend: React.js, Next.js, TypeScript, JavaScript, Tailwind CSS, Redux Toolkit, Material UI, Bootstrap, HTML, CSS

Backend: Node.js, Express.js, Python, FastAPI, GraphQL, REST APIs, JWT, NextAuth, Stripe, Nodemailer

Databases: MongoDB, DynamoDB, PostgreSQL, MySQL, Firebase, Prisma, Mongoose

Cloud & DevOps: AWS, GCP, Supabase, Vercel, Docker, Kubernetes, GitHub Actions, Jenkins, Nginx

Mobile: Flutter, Dart

Tools: Git, GitHub, Jest, Figma, Postman, AWS CLI
